

Exercise - 4

So you just saw the instructor make a super impressive pivot table that conveyed the most popular pick-up spots in New York City for taxi cab drivers. All of this will help our movie producer and director film a realistic ending to our rom-com film.

Let's test your knowledge now. Let's imagine that your producer wants to know the average amount of tip a taxi driver earns. She is brainstorming an alternate ending, in which the lead character gives an over-the-top tip to the taxi cab driver so that they can follow another cab. That other cab is carrying the main character's true love to the airport and possibly out of New York forever!

Here is your assignment, in three steps:

1. Create a pivot table that shows the average tip.
2. Then, help your boss make a list of three more patterns that emerge from your pivot table.
3. You may want to start with the Explore feature to get some ideas

Use the document below to jumpstart your test!
