Answer key - 2

1. Open Data menu and select Create a filter. Choose to filter movies only to see releases from the year 2016.

2. Select all the data on your sheet. Open Data menu and select Sort range. In this case we want to sort the Box Office Revenue, so we're going to sort by Column N and in descending order.

You should see "Batman v Superman: Dawn of Justice" in first place with $872,700,000.00.

3. To calculate the average box office revenue, select all the data in the Box Office Revenue (Column N). Then apply the average formula: =AVERAGE(N2:N509)

You should find $151,983,208.66
