Exercise - 3

Use the Movie Data Practice Sheet below to jumpstart your test! So we have just reviewed how to format your spreadsheet so that it tells a story. We are going to practice all that we have learned to make an attractive sheet for our producer. She wants to know the movie director that made the highest-grossing film for the least amount of money. The studio wants someone at the helm who can stay under budget and on time. Let's make a clean sheet that communicates exactly who you'd recommend for the job.

Follow these four steps:

1. Duplicate the "Movie Data" sheet.
2. Hide all columns except the ones that report the Movie Title, Year, Director, Budget and Box Office.
3. Sort the Budget column (Column 0) in ascending order. Once you've determined who directed the least expensive film but yielded the highest profit at the box office, let's give your boss a little something extra.
4. Highlight the Budget column in a different color from the rest of the sheet. Then format the winning director's name in bold. To help your producer even more, add an image of the director in a new cell at the end of the row.

Use the document below to jumpstart your test!
